

Ganpat University - Faculty of Engineering & Technology

Computer Engineering/Information Technology

2CEIT5PE17 – Software Packages

Index

CO1	Acquire knowledge of asynchronous programming with Node.js.
CO2	Understand working of Node.js with database and framework to develop server side applications.
CO3	Create a fully functional application by applying the concept of React.js.
CO4	Apply acquired knowledge to develop a comprehensive full-stack application.

List of Experiments

Sr. No	Experiments	Start Date	End Date	Faculty Sign & Date	Remarks (if any)	CO Mapping
1	Introduction and Installation of Node.js.					1
2	Implement Console based Node.js applications.					1,2
3	Utilize core (http, fs, url, util, path, os, events) and local modules to demonstrate their output.					1,2
4	Create Node.js application with MySQL database.					2
5	Apply different features of Express.js to make web applications using Node.js.					2
6	Make environment setup for React.js application. Create single page application using React.js.					3
7	Design a Feedback Form using react.js with proper validation.					3.4
8	Full-Stack Mini Project Using Node.js and React.js					4
